AVIAN AND REPTILE MEDICINE

FIRST AID AND DIAGNOSTICS IN REPTILES

This lecture consists of two parts.

The first part is about first aid in reptiles: what should be done to quickly assess the seriousness of clinical presentations of reptile patients and what can or should be done to stabilise them.

The second part is about diagnostic methods in reptiles: there are many diagnostic methods that may or may not be considered by practising veterinarians, many of which are very relevant for use in first line practice.
